

Mobile roll forming machines

Active worldwide for over 20 years, in custom-made machines for sheet metal working from coil

Pasterkamp Metal Sheet Solutions is known for its expertise in roll forming, from small profiles to wide panels. Together with our customers, we create the perfect machine for every production need.

Our specialty is the design and production of mobile roll forming machines, completely customized. Suitable for various specifications, material widths and thicknesses up to 1.5 mm. Even rotary punching can be integrated!

Applications in horticulture and solar industry

Our mobile roll formers are popular in horticulture and greenhouse construction, and the solar energy sector is also increasingly using these innovative solutions.

Flexible transport options

Our machines can produce various gutters and profiles on-site, from a trailer or container. They are easy to transport on trucks or tracks and can even be supplied with a remote control.

Designing for success

We invite you to discuss your production requirements with us. With drawings, quantities, lengths and speed requirements in mind, we design a machine that perfectly meets your needs.

We think along with you, so that an innovative and efficient machine is developed.

Contact us to optimize your production process!
